LinkedIn | LeetCode | Portfolio | GitHub

Professional Summary

Computer Science undergraduate with strong expertise in Data Structures and Algorithms, having solved 550+ problems across competitive platforms. Proficient in full-stack development using the MERN stack with solid foundations in OOPS, DBMS, Operating Systems, and Computer Networks. Focused on building scalable systems with optimized performance and clean architecture.

Education

CHITKARA UNIVERSITY, Rajpura

8.92 CGPA

Bachelor of Engineering (B.E) | Computer Science and Engineering | 2023-2027

Technical Skills

- **Languages:** Java, C++, JavaScript (ES6+), SQL
- **Backend:** Node.js, Express.js, RESTful APIs, JWT Authentication, Authorization, Validation, Error Handling
- **Frontend:** React.js, HTML5, CSS3, Tailwind CSS
- **Databases:** MySQL, MongoDB, Redis (Caching, Indexing, Data Modeling)
- **Core Concepts:** OOPS, Data Structures & Algorithms, System Design, SDLC
- **CS Fundamentals:** Operating Systems, DBMS, Computer Networks
- **DevOps & Tools:** Git, CI/CD, Docker, AWS, Postman

Projects

- CareerConnect — Job Portal & Resume Analyzer (MERN) {GitHub}**
 - Designed and implemented role-based job workflows with secure REST APIs and dashboard services.
 - Improved API performance by integrating Redis caching and optimizing MongoDB queries.
 - Executed JWT authentication, input validation, and centralized error handling for robust request processing.
 - Debugged asynchronous workflows and streamlined multi-step job application pipelines.
- Dream Nest — Hotel & Rental Booking Platform (MERN) {GitHub}**
 - Developed a full-stack booking platform for hotels, resorts, and home rentals using the MERN stack.
 - Applied Role-Based Access Control for users, property owners, and admins to manage listings, bookings and platform operations.
 - Integrated secure payment gateway for online transactions with booking confirmation and order tracking.
 - Designed RESTful APIs for property management, filtering, booking workflows and transaction handling.
- Delhi Metro Rail App — Shortest Path & Fare Calculator (Java) {GitHub}**
 - Modeled metro network using Graph data structures with weighted edges representing inter-station distances.
 - Implemented Dijkstra's algorithm to compute the shortest routes and dynamic fare calculation.
 - Utilized Heap (Priority Queue) to optimize minimum-distance extraction and improve efficiency.
 - Applied BFS and DFS for traversal, route exploration, and network validation.

Achievements & Certifications

- Competitive programming rating 1583 (Top 25.74% among 800,000+ global participants).
- Solved more than 550 DSA problems across LeetCode and GeeksforGeeks.
- Led 3+ development teams achieving 95%+ on-time project delivery.
- Postman API Fundamentals Student Expert.
- Goldman Sachs Software Engineering Simulation (Forage).
