Professional Summary

Computer Science undergraduate (CGPA 8.92) with strong problem-solving skills (600+ DSA problems) and hands-on experience building scalable full-stack applications using the MERN stack. Experienced in designing secure REST APIs, optimizing performance using Redis caching, and implementing role-based access control systems. Passionate about building efficient, production-ready systems with clean architecture and high performance.

Education

CHITKARA UNIVERSITY, Rajpura

8.92 CGPA

Bachelor of Engineering (B.E) | Computer Science and Engineering | 2023–2027

Technical Skills

- **Languages:** Java, C++, JavaScript (ES6+), SQL
- **Backend:** Node.js, Express.js, REST APIs, JWT Authentication, Authorization, Validation, Error Handling
- **Frontend:** React.js, HTML5, CSS3, Tailwind CSS
- **Databases:** MySQL, MongoDB, Redis (Caching, Indexing, Data Modeling)
- **Core Concepts:** OOPS, Data Structures & Algorithms, System Design, SDLC
- **CS Fundamentals:** Operating Systems, DBMS, Computer Networks
- **DevOps & Tools:** Git, CI/CD, Docker, AWS, Postman

Projects

1. **CareerConnect — Job Portal & Resume Analyzer (MERN)** {GitHub}
 - Implemented role-based job workflows with secure REST APIs and dashboard services.
 - Designed a scalable backend using modular and service-oriented design principles.
 - Improved API response time by 30–40% using Redis caching and optimized MongoDB queries.
 - Integrated JWT authentication, input validation, and centralized error handling for robust request processing.
2. **Dream Nest — Hotel & Rental Booking Platform (MERN)** {GitHub}
 - Built a full-stack booking platform that supports property listings, bookings, and transactions with secure payment integration.
 - Implemented Role-Based Access (RBAC) Control for users, property owners, and admins to manage listings, bookings, and platform operations.
 - Integrated secure payment gateway for online transactions with booking confirmation and order tracking.
 - Designed REST APIs for property management, filtering, booking workflows, and transaction handling.
3. **Delhi Metro Rail App — Shortest Path & Fare Calculator (Java)** {GitHub}
 - Modeled metro network using Graph data structures with weighted edges representing inter-station distances.
 - Implemented Dijkstra's algorithm to compute the shortest routes efficiently, reducing the complexity of path computation for large metro networks.
 - Use Heap (Priority Queue) to optimize minimum-distance extraction and improve efficiency.
 - Applied BFS and DFS for traversal, route exploration, and network validation.

Achievements & Certifications

- Achieved a competitive programming rating of 1583 (Top 25.74% among 800,000+ participants).
- Solved more than 600 DSA problems across LeetCode and GeeksforGeeks.
- Led 3+ development teams achieving 95%+ on-time project delivery.
- AWS Cloud Essentials – Knowledge Badge (AWS Training & Certification).
- Postman API Fundamentals Student Expert.
- Goldman Sachs Software Engineering Simulation (Forage).
